(1) Once CMYKit has received the 'First Payment' we will schedule onsite time to complete 'proof of concept'.

During this stage of the PSO project CMYKit assess all currently installed equipment, ink and papers for print and proof requirements as well as assessing analogue &/or digital presses and proofing system will adhere to the ISO_12647 standards. Illumination, PDF file and workflow requirements, colour management, current in-house Standard Operating Procedures are also evaluated.

At the completion of this stage CMYKit will supply the client with a print from the analogue or digital press that falls within tolerances against ISO_12647 (press time will be required as a point of urgency). This print proves concept, i.e. That PSO can be achieved and a detailed report gives the client a detailed comprehensive report confirming the minimum requirements will be able to be achieved and CMYKit can move forward into implementation, or there are further technological changes required before moving forward with implementation (i.e. We have established a piece of hardware &/or software will not pass the PSO audit).

CMYKit will spend as much time as commercially appropriate to achieve 'proof of concept' as this is the initial stage that any PSO implementation project moves forward from.

(2) Following receipt of the 'Second Payment' CMYKit will complete all final technical implementation work, assist with the creation of all personalised documentation, train all key staff in the day to day use of the SOPs (Standard Operating Procedures) and prepare all key staff for the PSO audit.

(3) CMYKit offers a 100% Guarantee~ that we can deliver what we promise, hence 'Final Payment' falls due 14 days after the client receives the positive PSO report from GASAA and Ugra.

~(operator's not following SOP (Standard Operating Procedures) during the audit will render the guarantee null and void)

(4) CMYKit from time to time offer payment plans to alleviate any financial barrier to entry to becoming a PSO printer, please contact us on 02 8004 2040 to discuss options

(5) The audit fee is invoiced by and paid separately to GASAA

* These total solutions also include the following support time to help with issues that may arise / documentation refining etc. Additional support will be scheduled at CMYKit discretions upon a customer request and is not to exceed the following maximum hours (phone and onsite); 'Prepress Only' - 10 hours, 'Print Only' - 15 hours & 'Print with Prepress' = 20 hours. This is offered for up to 6 months after GASAA / Ugra Certification has been achieved and is only available after final payment has been received.

** Additional Support is the special rate for CMYKit technical services and is for work outside the PSO project, for customers who are CMYKit PSO clients.
